

## Madesp Mouldings Celebrates its 30<sup>th</sup> Anniversary!

*Benedito Novo/SC – Brazil – (November 16, 2023)* - Established in 1993, Madesp Mouldings proudly incorporated the acronym MADEIRA SPIESS in its name, a reflection of the family's last name and the essence of its legacy, wood (madeira in Portuguese).

The company initially produced sawn wood for the Brazilian civil construction and furniture market. In 1996, Madesp Mouldings expanded its horizons by venturing into the international market, exporting sawn wood and fencing to the American market. After that, the product range grew, adding more sophisticated components for the wood and millwork market as S4S Boards, Flat and Split Jambs, Casing, Base, Stool, Crowns, among others.

Demonstrating a commitment to the environment, Madesp Bioenergy was founded in 2021, focusing on transforming waste from Madesp Mouldings into wood pellets. This innovative approach optimizes waste utilization, generating clean and renewable energy.

Equipped with state-of-the-art machinery, Madesp is capable of meeting customer demand across the entire spectrum of the wood & millwork market and biomass/pellet production. Additionally, the company places great emphasis on concluding its raw material self-sufficiency, planning to complete its forestry supply cycle in the upcoming years.

Today, at the age of 30, Madesp Mouldings still maintains the Spiess' family essence, but with the hundreds of our employees' families added, we became the Madesp family.

We are very thankful for our loyal customers throughout all of these years and for the many more to come!
